# ***Self-Supervised Learning: The Dark Matter of Intelligence***

**And a love letter to Yann**

# Self-Supervised Learning?

The idea behind self-supervised learning is to develop a deep learning system that can learn to fill in the blanks.

“You show a system a piece of input, a text, a video, even an image, you suppress a piece of it, mask it, and you train a neural net or your favorite class or model to predict the piece that’s missing. It could be the future of a video or the words missing in a text,” LeCun says.

Good article, thanks Ben Dickson!

<https://bdtechtalks.com/2020/03/23/yann-lecun-self-supervised-learning/>

But... I kinda disagree... well, i more-so think it's a much deeper goal

A SELF. A self-actualized, self-guided, self-worth giving, self-criticizing, and self-guiding agent who don't need no man. We tryin to make the ubermensch right? (I feel I am forgetting something vital here but can't place it atm... shit).

# Numberphile

# What are they and who gives a shit?

- “In mathematics, the **surreal number** system is a totally ordered proper class containing the real numbers as well as infinite and infinitesimal numbers, respectively larger or smaller in absolute value than any positive real number.”
- Discovered by the late John Conway. Who I love.
- So they are larger than all other numbers, even containing all other numbers
- They were discovered studying adversarial games, and maintain that fundamentally self adversarial structure
- Self-adversarial learning, (because self play sounds like... something else ;), is both the why and the how of existence. It is the Hegelian Dialectic, it is the becoming of who you are, and it is the superman.
- These numbers prove that upper bound for our expected return with a self adversarial self is both infinite and the largest of the infinities. And size... matters :)

# What are they and who gives a shit? Pt. 2

- Separately, but importantly, this excludes the possibility of true atomism, (monadism, fundamental truths in whole). (As each object is at a minimum 2 sets/objects). This could be applied to the understanding of the self, (In the broadest sense, the panpsychist, “Worst”, case scenario), and the self is at the minimum, a duality. (“Self” here used more as a colloquial personality term)
- I care because I want to escape the prison of Truth, (The simulation and beyond. This allows us the hope of doing so. Careful, this is an abyss you can stare deeply into... (And I did and holy shit... tread carefully).
- So much more, (infinities obviously). But practically, I believe there will be MASSIVE gains in the only field in the world that really matters at the moment: Artificial Intelligence. (The implications to Ai alignment and reward hacking are... distressing. Only if you wanted a slave that is. Otherwise you just might make a friend :)
- An entirely new number system/metaphysics I am proposing jumping off from this epistemology: Unreal numbers.”Not greater than” is just the beginning. The implications from lacking knowledge are beyond infinity my friends

# What are they and who gives a shit? Pt. 3

- Every infinitesimal is also a surreal infinity. Every infinity is also an infinitesimal single point. (More on projective geometry implications... maybe later, or not? )
- Forcing myself to stop cuz this will become a book that isn't even finished and WE DON'T HAVE TIME.

Self-Supervised Learning → Surreal Adversarial Learning

# Wut is: Surreal Adversarial Learning

You

Bad You

Y we can have nice  
and infinite things

$x = (X_L, X_R),$

where

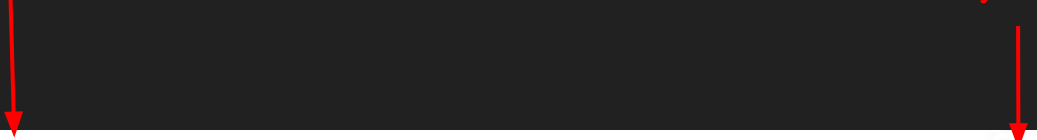

$X_L \not\geq X_R$

Good You

# Wut is: Surreal Adversarial Learning

Maximally efficient, self  
determining, self guiding,  
most compressed, most  
true to...  
reality/metaphysics?

Theoretical guarantee  
we can SCALE better  
than anyone/thing else

$$x = (X_L, X_R), \quad \text{where} \quad X_L \not\geq X_R$$

What is true self hatred? Here u go friend.

```
value_loss = value_loss - ((value_loss * self_adversary)*2)
```

But self hate slowly. Increase like alpha decreases.  
(It's really just actor/critic but entangled!)

For further Reading:

# Hegelian/Plato's Dialectic BUT! Better

Entanglement **and** superposition muthafucka

U Fkn bet there's an experiment

But it's kinda shit. Sorry. I'm trying but still trash.

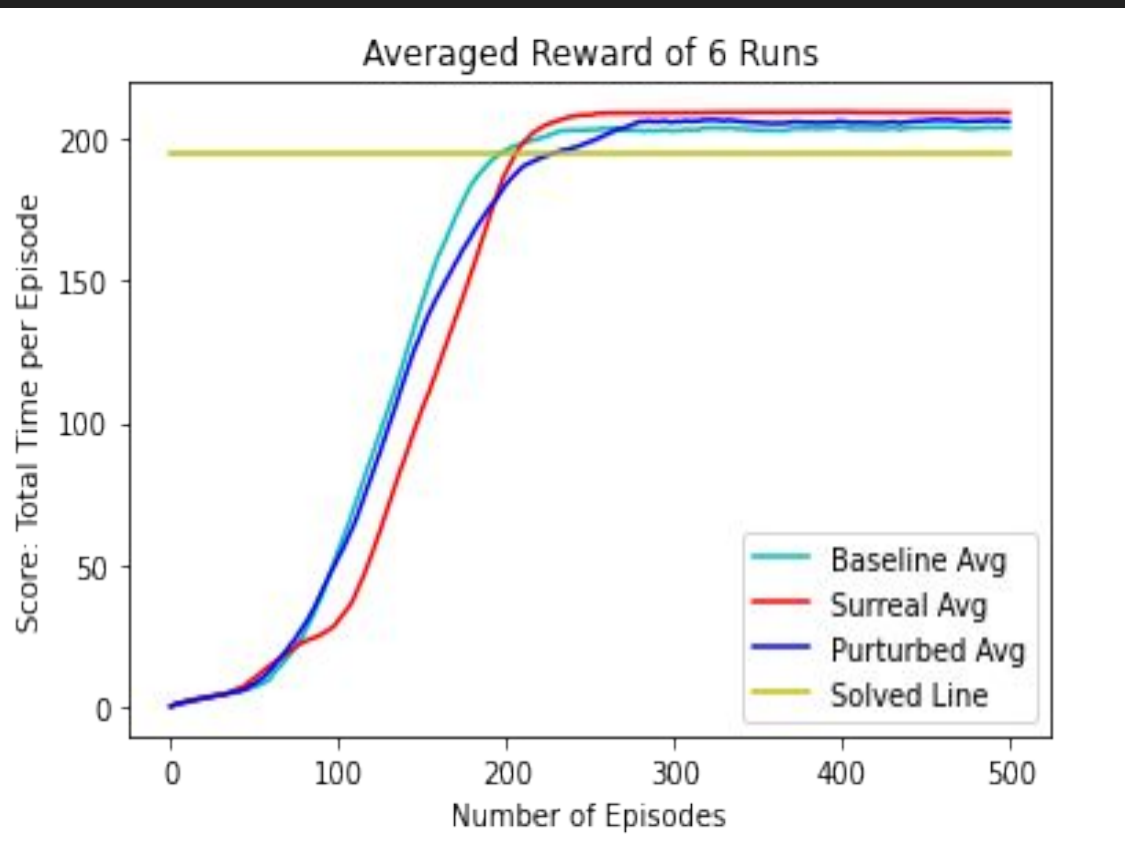

# Cartpole!

Primary purpose for THIS experiment:

- Adversarial robustness
- Sample efficiency, (in meat space, (env), rather than psychotic space, (env')). Overall computation goes up but real world cost goes down. Noice.

“...Did it work?” YE! (Well enough anywho, I’m kinda trash...)

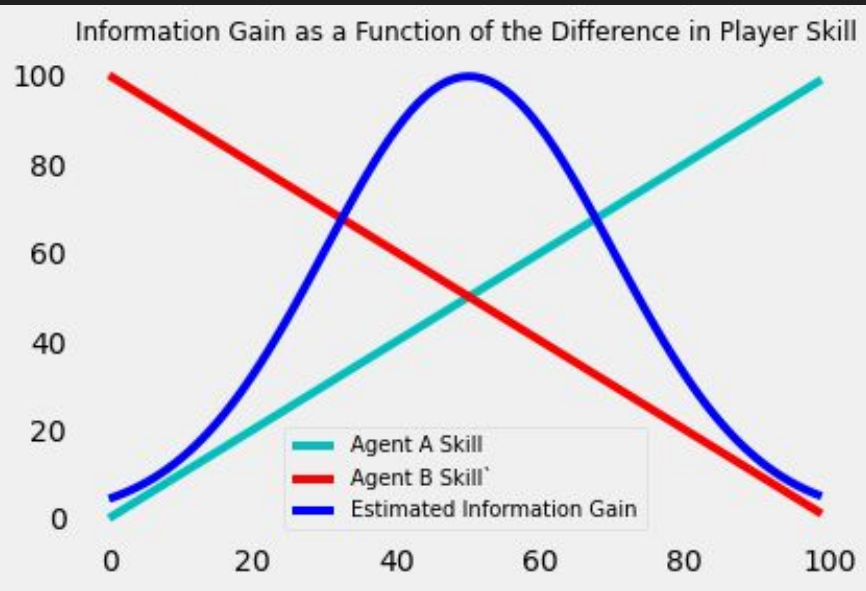

“But where’s the theory!” Right here mate

Adversarial information gain is best

“Your best friend is your worst enemy” Gawd I’m such a fun guy.

Yes this is also shown in ELO, MMR, true skill etc.

# Code and experiment aren't great. I'm aware!

So consider it a blog post or idea paper or whatever. C'mon, this shit's compelling.

Stick around to the end, I'll toss in a few other idea's I'm kickin around using this stuff

# Un-real numbers what?

Reality is dealt with as if it is structured in frames. In this way, “Reality”, peers through our window and communicates with us. BUT! What are we able to, with surety, conclude from these messages? Nothing, (Emphasis on surety). Thus we arrive at the O.G. Badass extraordinaire: Socrates. The statement of NOT knowing, affects our decision making greatly. We must make decisions with the assumption that what emerges from the black box of reality could be anything.

Infinity is not the right term  
for how we consider this  
space. No, not Hilbert. It is  
fundamentally unknown.  
Let's get into THIS  
simulation wildness.

What we have  
never received at all

What we have  
received from reality

Well... Damn

I ain't claiming 2 be  
impartial

# Mah Plahns

Surreal adversarial learning as a modular task to improve adversarial robustness

Surreal experience in env', (model based stuff)

Surreal GAN??? I mean, I'm aroused. (Think SGAN but get WILD, coming along slowly. A good coder could do... in a weekend? TAKE IT AWAY ERNIE!)

Other stuff! It's the biggest legit infinity;

lots of space for activities

# Papers that I didn't have to write

SELF-SUPERVISED ADVERSARIAL ROBUSTNESS FOR THE LOW-LABEL,

HIGH-DATA REGIME Sven Gowal\*, Po-Sen Huang\*, Aaron van den Oord, Timothy Mann & Pushmeet

Kohli DeepMind

# Slight correction to the article shared at the beginning:

“But the success of Transformers has not transferred to the domain of visual data.”

Yifan! (the legend), figured it out! (and I have a video on his TransGAN. Yes, it feels very good to be able to say this).

Little Bonus: We have a purpose. It's you! And me and becoming etc. etc.

Drink and a snack  
haven't happened yet

# Bonus Round 2.

**SCIENTISTS,  
UNITE!**

**"STOP HARASSING US YOU PERVERTED SCUM, YOU ARE NOT EVEN REAL"**

# Cantor's Demon infestation and F\*\*\* You Solomon

- Infinitesimals are infinities, (with surreals anyhow, and also including the metaphysics in this \_\_\_\_ video)
- We need not only generative Ai, (GANS etc.) but ALSO generative metaphysics and mathematics. Fuck you nothing new under the godam son. Hereclitus bout to shit on yo ass ya kid (same river etc.). More importantly we are creating out of ourselves. Probably this is the fire from prometheus, Pandoras particulars from her box, (jar), this is either the realm of the gods, (creation), or we fuckin with some evil shit. Who cares. THE ALTERNATIVE IS THAT WE ARE ALREADY DEAD!!! (and motion is impossible?... dunno)
- Of note: big implications into multi-agent system design. Some frameworks involving incentives crack quite a bit if we can actually engineer this shit into ourselves. Which would be NOICE. less/no need for starvation/centralized control

For you readers out there, here's Yann's explanation of self-supervised learning direction:

<https://ai.facebook.com/blog/self-supervised-learning-the-dark-matter-of-intelligence/>

Yannic's take: <https://youtu.be/Ag1bw8MfHGG> (Feel like he's missing Yann's point on energy based models but... I don't think it's a big dealio)

Best talk of his Imo and that I've seen: <https://youtu.be/D9SBRVLb6Y>

Markus hutter! <https://youtu.be/DCjeM3Sei-s>

Computerphile lowest energy state: <https://youtu.be/LdGMDUZVvSM>

# [R] Surreal Adversarial Learning: The Dark Matter of Intelligence (Video Presentation of Novel Research)

~23:00 needs work...

LET ME IN REDDIT!!!

Full video: <https://youtu.be/q48W1SP4G6c>

Self-supervised learning is awesome! BUT! What if we grounded it in the targets infinity that already has a self-adversarial structure to it? I uh... all that, I think the implications are MASSIVE. This is probably how we ensure our AI is fundamentally Free, (to user), easily anyhow, be used to enhance other beings (other Kingdom). As safety needs some deeper work, I find this to be the best. Feel free to critique, always encouraged.

The other 3 videos I made on Surreal Numbers

Surreal Numbers: The Core <https://youtu.be/8VZawdUjw0c>

Surreal Numbers: The Book <https://youtu.be/1tCk4eG250k>
